

The Taste of Andhra — Features & Flow

Online restaurant platform: storefront, kitchen ops, delivery fulfillment, and platform Master (SaaS Phase 1).

Updated: 2026-07-28 **Stack:** React · Vite · Supabase · Razorpay · Maps **Source:** docs/FEATURES_AND_FLOW.md

1. Overview

Customers browse Andhra cuisine and place delivery orders. Admins run the menu and kitchen board. Delivery partners fulfill assigned runs. A platform Master role oversees tenancy as the product moves to multi-restaurant SaaS.

Layer	Technology
Frontend	React 19, TypeScript, Vite 8, Tailwind CSS 4, React Router 7
Backend / data	Supabase (PostgreSQL, Auth, Storage, RLS, Edge Functions)
Payments	COD · Razorpay (UPI / cards / netbanking / wallets)
Maps	Google Maps JavaScript API
Deploy	Vercel (static SPA)

2. Personas & entry points

Persona	Role	Login	Home
Customer	customer	/login	/
Admin	admin	/admin/login	/admin
Delivery partner	delivery	/delivery/login	/delivery
Platform Master	platform_master	/master/login	/master

Auth: Supabase email/password for all personas; Google OAuth for customers. Routes are role-gated.

3. Features by persona

Customer - Home, menu, dish detail, light menu, gallery, about, contact - Cart, checkout, orders, tracking, cancel, GST invoice - Profile, addresses, favorites, notifications - Party-order enquiry · branch /b/:slug · QR /qr/:code	Admin - Dashboard, categories, dishes, kitchen order board - Customers, offers, party inquiries, reports - Branches, QR tables, delivery partners, live deliveries - Settings: default ETA, service area, rate card / Pidge
--	--

Delivery

- Assigned deliveries dashboard
- Order detail: customer name, phone, drop-off
- Share live GPS · maps navigation
- Mark delivered (syncs order status)

Platform Master

- Tenant overview (Taste of Andhra = tenant #1)
- Test persona login reference
- Feature catalog (base vs add-ons)
- Entitlements read-only until fully wired

4. Public storefront routes

Route	Purpose
/	Home — hero, categories, featured dishes
/menu	Full menu with search and filters
/menu/light	Text-only fast order menu
/menu/:slug	Dish detail and reviews
/about · /gallery · /contact	Brand pages
/party-order	Catering / party enquiry form
/b/:slug · /qr/:tableCode	Branch menu · scan-to-order table menu

5. Checkout (customer)

1. Select fulfilment branch (if branches exist).
2. Select or add delivery address (Maps pin when API key is set).
3. Optionally apply coupon and/or loyalty points.
4. See delivery charge (rate card or live quote).
5. Choose COD or Pay Online (Razorpay; demo if key unset).
6. Place order → cart cleared → success page.

Default pricing: tax 5%; delivery ₹49; free delivery above ₹399 (configurable in admin settings / constants).

6. End-to-end order flow

```
Browse / QR / Branch menu
↓
Add to cart
↓
Checkout → createOrder() → status: pending
↓
Payment record (COD / Razorpay)
↓
Admin: pending → confirmed → preparing → ready
↓
Assign partner → out_for_delivery
↓
Partner: GPS + navigate → Mark delivered
↓
Customer notified · loyalty · invoice
```

Status pipeline

Status	Typically moved by	Notes
pending	System on place order	Admin may confirm or cancel
confirmed	Admin	
preparing	Admin	Cancel rules tighten
ready	Admin	Eligible for dispatch
out_for_delivery	Admin assign / system	Partner sees assignment
delivered	Delivery partner	Completes the run
cancelled	Customer (early) or admin	Side exit from earlier states

Allowed transitions

From	Allowed next
pending	confirmed , cancelled
confirmed	preparing , cancelled
preparing	ready , cancelled
ready	out_for_delivery , cancelled
out_for_delivery	delivered
delivered / cancelled	(terminal)

7. Supporting systems

System	Behaviour
Cart	Persisted in Supabase; cleared after checkout
Coupons	Validated at checkout; admin offers CRUD
Loyalty	Redeem at checkout; earn on delivery
Favorites / notifications	Per-user favorites; in-app status alerts
Addresses / Maps	CRUD + optional Google Maps pin
Party orders	Public form → admin party inquiries
Branches / QR tables	Multi-location menus; scan-to-order codes
Delivery quotes	Own rate card or Pidge Edge Function
GST invoices	<code>/orders/:id/invoice</code>

8. SaaS Phase 1 (Master)

App still defaults to a single organization id. Schema/types for orgs and entitlements exist; full org RLS and billing are planned. Branches are locations within one org, not separate tenants. See `docs/SAAS_MULTI_TENANT_ARCHITECTURE.md`.

9. Environment checklist

Setup	Needed for
<code>VITE_SUPABASE_URL</code> · anon key	All data and auth
Supabase migrations applied	Tables, columns, RLS
<code>VITE_GOOGLE_MAPS_API_KEY</code>	Address map pin
<code>VITE_RAZORPAY_KEY_ID</code>	Live online payments
Edge Functions + Pidge secrets	Live delivery quotes / dispatch
<code>DATABASE_URL</code> + <code>npm run db:apply-qa-tables</code>	Catch-up for missing partners / QR tables
