

Order Status & Delivery Walkthrough

Admin status dropdown and delivery app updates (Out for Delivery → Delivered)

Site: <https://www.thetasteofandhra.com> **Password:** Test@123 **Doc:** QA_ORDER_STATUS_WALKTHROUGH

Use **two or three browser windows** (or normal + private/incognito) so Customer, Admin, and Delivery stay logged in at the same time. Use matching tester accounts only (Tester 1 with Tester 1, Tester 2 with Tester 2).

Persona	Login	Password
Customer	/login	Test@123
Admin	/admin/login	Test@123
Delivery	/delivery/login	Test@123

Part A — Admin status dropdown (kitchen progress)

Goal

Move an order through **Pending** → **Confirmed** → **Preparing** → **Ready** and confirm the customer Order Tracking stepper updates.

Setup

- Customer** — place an order (menu → cart → checkout).
- Note the **order number**.
- Open the order: **My Orders** → order → /orders/:orderId.
- Confirm tracking shows **Pending** with **Current status**, and **Cancel Order** is visible.

Steps (Admin)

- Log in as **Admin** → <https://www.thetasteofandhra.com/admin/orders>
- Find the order (search by order number if needed).
- In the row **status dropdown**, change status one step at a time:

Change to	Toast / admin UI	Customer tracking
Confirmed	"Order status updated"; badge = Confirmed	Step 2 current; step 1 completed (checkmark); Cancel still available
Preparing	Status saved	Step 3 current; Cancel Order hidden
Ready	Status saved	Step 4 current

You can also open the order (**View**) and update status from the detail modal — same expected results.

Pass criteria

- ☐ Each dropdown change shows success toast and updates the admin badge.
- ☐ Customer stepper "Current status" moves to the matching step after refresh (or reopen).
- ☐ Completed steps show checkmarks; future steps stay grey.
- ☐ Cancel is only available for Pending / Confirmed.

Optional checks

- Filter admin orders by status — order appears under the new filter.
- Set status to **Cancelled** from admin — customer page shows cancelled state (not the 6-step tracker).

Part B — Assign delivery → Out for Delivery

Orders appear under **Awaiting Assignment** only when status is **Confirmed**, **Preparing**, or **Ready** (not Pending, and not already assigned).

Steps (Admin)

1. Ensure the test order is at least **Confirmed** (ideally **Ready**) via Part A.
2. Open <https://www.thetasteofandhra.com/admin/delivery>
3. Under **Awaiting Assignment**, find the order → **Assign**.
4. In the modal, select your tester delivery partner (or enter name + 10-digit phone).
5. Submit.

Expected

- Toast: **Delivery partner assigned**
- Order leaves **Awaiting Assignment** and appears under **Active Deliveries**
- Order status becomes **Out for Delivery**
- Customer tracking: step 5 (**Out for Delivery**) = current; live tracking map section may appear
- Delivery partner sees the order on <https://www.thetasteofandhra.com/delivery>

Pass criteria

- ☐ Assignment succeeds with Tester delivery account selected.
- ☐ Customer order status / stepper = Out for Delivery.
- ☐ Same order is visible on Delivery dashboard.

Part C — Delivery app: Out for Delivery → Delivered

Steps (Delivery)

1. Log in as **Delivery** → <https://www.thetasteofandhra.com/delivery>
2. Confirm the assigned order appears (**My Deliveries**).
3. Open **View Details**.

4. Verify customer name, phone, address, and order total.
5. Optional: click **Share Live Location** and allow GPS — toast **Sharing live location**; customer live map may update.
6. Click **Mark Delivered** (from the detail page or the dashboard card).

Expected

- Toast: **Order marked as delivered**
- Delivery badge / status = **Delivered** ; **Mark Delivered** no longer shown
- Customer order: step 6 (**Delivered**) = current; all prior steps completed
- Admin **Active Deliveries** reflects Delivered (or moves off active list depending on UI)

Pass criteria

- ☐ Mark Delivered updates delivery + order status together.
- ☐ Customer tracking ends on Delivered.
- ☐ Cannot mark the same delivery delivered again (button gone).

Suggested full path (one sitting)

Common blockers

Issue	Likely cause
Order missing from Awaiting Assignment	Still Pending , already assigned, or wrong status
Delivery dashboard empty	Admin assigned a different partner / phone, or wrong tester account
Customer still shows old step	Refresh order details page
Location share fails	Browser denied geolocation; not a status bug
Cancel still visible after Preparing	Bug — report with order number and current status
